The sequence sent is 2, 2, 4, 2, 2, 4, 2, 2, 3, and the transmission becomes garbled.

1. What do you think could be the next three entries in this sequence? _____, _____, _____

Explain your answer.

Assume that each of the following sequences follows a certain pattern. Fill in the blank(s) with the next entry (entries) in the sequence.

Using the TI-Nspire (CALCULATOR page) indicate the designated entries for each sequence.

Example: List the terms of a sequence given an expression/formula such as: $a_n = 3n + 4$

Use Catalog, seq(

Type formula, variable, first value for the variable, last value for the variable, and increment

Notice that the variable may be entered as x instead of n . If you wish to use n , use your alpha key to enter n .

22. List the first 7 terms of: $a_n = 4n^2 + 1$

23. List the first 10 terms of: $a_n = \left(\frac{1}{2^n}\right)$

24. List the 4th through the 12th terms of: $a_n = (-1)^n \cdot (n + 1)^2$

25. List the 3rd through the 15th terms of: $a_n = n(n + 1)(n + 2)$
